Street Address:

1 Rectangle — — — — — Indicates rectangular fitting measure for the waterline of the Pool Cover to be cut.

2 Shaped Indicates Curvilinear Measuring:

1 Chalk mark two points ● A and ● B at the longest point 200mm from the edge of the pool. (Record total width and length)

2 Chalk mark and number a series of ● Mark and measure the actual size you want the cover cut. For rectangular pools measure change of direction, ● 1, ● 2, ● 3 etc. starting **clockwise** from ● A all around to ● B about 900mm apart. Closer on tighter curves further apart for straighter edges.

3 Measure the distances from ● A to marked ● all points and record the distance to every chalk marked. eg
● A to ● 1 = 957mm or 95.7 cm

4 Measure the distances from ● B to marked ● points and record the distance to every chalk marked. eg
● B to ● 1 = 8500mm or 850cm

5 Draw a sketch of the pool outline (like the one top right) indicating approximate location of points A and B and the points between.

6 Email to us your measurements on this page.

The same method and measurements will be used to make the cover.

NOTE: This measuring procedure applies only to curvilinear pools. If you measure counter clockwise from 'A' the cover will be manufactured upside down.

Draw a sketch of the plan. Include a photo image if possible.

[illegible]

- A – B Length =

● C – D Length =

● Last Point Before B =
